- 1 Problem Identification and Statement.
- 2 Gathering of Information and Input/Output Description.
- 3 Test Cases (Hand-Solved Examples) and Algorithm Design.
- 4 Implementation.
- 5 Software Testing and Verification.

```
1  /*-----*/
2  /* Name: your_name_here, Student Number: 0000001 */
3  /* Date: August 24, 2020. */
4  /* Program: distance.cpp */
5  /* Description: This program computes the distance */
6  /* between two points. */
7  /*-----*/
8  #include <iostream>
9  #include <cmath>
10 using namespace std;
11 int main()
12 {
13     /* Declare and initialize the variables */
14     double x1 = -1, y1 = -3, x2 = 4, y2 = 6;
15     double length1, length2, distance;
16
17     /* Compute the sides of a right triangle */
18     length1 = x2 - x1;
19     length2 = y2 - y1;
20
```

```
21  /* Compute the distance between the two points. */
22  distance = sqrt(length1*length1 + length2*length2);
23
24  /* Print the distance */
25  cout << "The distance between the two points is " << distance << endl;
26  return (0);
27  }
28  /*-----End-----*/
```
